Magnum Metal Process Inaugurates their first design and procurement center in Pune

Magnum Metal Process Technologies™ Pvt. Ltd., a value-engineered solution provider which is a wholly-owned Indian subsidiary of Magnum Integrated Technologies Inc.™, opened its office in Pune, India. Magnum is a multi-divisional, multi-national ISO 9001: 2000 corporation headquartered in Brampton, Ontario, Canada,

Magnum Integrated Technologies Inc.™ has grown immensely over the last century, bringing together recognized and leading brand names within the primary metals and hydroelectric industries together through acquisitions. Magnum has been actively involved in quality design, engineering, manufacturing and installation of custom equipment and turnkey plants serving the primary metals (ferrous and non-ferrous) and hydro-electric industries for over a century.

Speaking at the inauguration, Mr. Andre Nazarian, President and CEO of Magnum Integrated Technologies™, stated that India was the obvious destination since Magnum products are already well known in India and are used widely by companies such as Indal, Hindalco, Jindal, Nalco, Meta Strip, Salem Steel, ordinance factories, etc.

From the broadest line of solutions to pre-engineered packaged solutions for many specific applications, Magnum's expertise encompasses process and machine control, automation and equipment for ferrous and non-ferrous industries, the power industry, and many diversified heavy industries around the world. Magnum's focus on product development rests heavily on value-engineered solutions. From its vast experience and knowledge bank Magnum™ seeks to solve its customers' unique application requirements.
